

More than an autopilot.

+

+

For less.

EFIS-D10A and two servos for \$3700
Or expand an EFIS with two servos for \$1500
Add the optional AP74 to any configuration for \$450

Introducing Dynon's autopilot. Fly magnetic heading, track, GPS, NAV, and altitude holds and changes; all fully integrated with your EFIS, bugs, and HSI.

Consider this: two EFISs and a 2-axis autopilot start at \$5900. That's two attitude indicators, two airspeed indicators, two altimeters, and... you get the picture. Redundancy done better.

Build anything from day VFR to hard IFR configurations for less than ever before.
