HS34 Basic Operation

► VALUE knob - only changes EFIS settings
  With no menu shown, turning it adjusts the barometer.
  With no menu shown, pushing and holding it sets the barometer to 29.92 inHg.
  With no menu shown, tapping it cycles to ALT bug adjustment mode
    (push and hold to sync).
  When in any menu which adjusts a numerical value, turning it adjusts that value.
  When in any EFIS menu, tapping it exits the menu system.
  Additional behavior can be configured in the EFIS > SETUP > HSI > VALUE KNOB menu.

► The light sensor can be configured in the EFIS > DIM menu to auto-dim all screens in a DSAB system.

► NAV/GPS status lights indicate the currently active nav source.

► NAV SRC cycles through possible navigation sources in the order configured by the pilot.

► BRG SRC configures bearing pointers on the HSI page. Exact behavior is dependent upon installed sources.

► HEADING knob
  Rotating it adjusts the heading bug and displays the bug if it is not displayed.
  Tapping it syncs the heading bug to the current heading.
  Pushing and holding it toggles the heading bug display.

► COURSE knob
  Rotating it adjusts the course if allowed by the nav source.
  Tapping it syncs the course to the current heading if allowed by the nav source.
  Pushing and holding it syncs the course to the Bearing to Active, when available.

► Please see your EFIS-based product Installation Guide appendix for detailed installation instructions. See your EFIS-based product Pilot’s User Guide for more usage instructions. The latest versions are available at our web site.
